How these risks manifest do vary between the two, with acetaminophen linked to liver toxicity, and ibuprofen capable of causing gastrointestinal bleeding and kidney damage. Choose as Best Answer. And I can understand that you are feeling very seek and also feel trouble to do your household works. The opinions expressed in WebMD User-generated content areas like communities, reviews, ratings, blogs, or WebMD Answers are solely those of the User, who may or may not have medical or scientific training. You must sign in to view your friends. I suspect that you'll be disappointed with OTC medications to treat your back pain as they probably won't touch your pain. It should also be noted that like most medications, Ibuprofen can have serious side effects and even cause stomach ulcers. Please see the bottom of the page for more information or visit our Terms and Conditions. WebMD understands that reading individual, real-life experiences can be a helpful resource, but it is never a substitute for professional medical advice, diagnosis, or treatment from a qualified health care provider. View top members Find a member. There is little to no clinically relevant difference in RX vs OTC ibuprofen i have ever read or learned about. [of note . The doctor doesn't care where you get the medicine (over the counter or from the pharmacy). They write counter. Tl;dr: No difference between 4 mg ibuprofen or 1 mg ibuprofen. As far as I can tell, the only difference between OTC ibuprofen and the kind you need a script for is the latter has a higher concentration of the stuff than the former (like mg versus mg). So why don't I . I don't understand why a stronger pain reliever isn't prescribed if you're dealing with a pharmacist. Oct 8, - In effect, there is no difference in taking 4, mg Ibuprofen and taking one mg Ibuprofen. While it is perfectly normal and safe to take ibuprofen occasionally (which is why it is non prescription) for occasional aches and pains without any doctor's suggestion -- pain that is more severe, or lasts for a long time (chronic) How does Meloxicam compare to Ibuprofen with regards to. My question is this isn't OTC and prescription Ibuprofen the same thing?? There's not a difference that I've ever learned about..? So I am thinking that it is safe for me to take up to 3,mg Ibuprofen/24hours, even though it is the OTC formulation and not Rx. For the past 2 days, I have been taking mg. Jun 5, - Also, often overlooked, is why one is taking the ibuprofen. It is an anti-inflammatory and analgesic (pain killer) -- whenever one is in pain there is an underlying cause. While it is perfectly normal and safe to take ibuprofen occasionally (which is why it is non prescription) for occasional aches and pains. May 24, - Yes, you can. Motrin used to be, long ago, only available by prescription. Now the only strength which requires a prescription is the mg. The mg type is usually given to people who take the maximum daily dosage of mg for a long period of time. It's easier for them to take 3 pills a day than it is. Sep 13, - I didn't really think about it until now but a quick Google search tells me there is zero difference between prescription and OTC acetaminophen (Tylenol) other than dosage, but I've had prescriptions for Ibuprofen that have been 4 times as strong and much cheaper than OTC, 30/ mg for \$ copay. Feb 28, - Text Size: A medicine is a substance intended for use in the diagnosis, cure, improvement, or prevention of disease. Here are the main differences between prescription and OTC medicines. Ibuprofen (Definition). Ibuprofen is a nonsteroidal anti-inflammatory drug (nsaid). It works by reducing hormones that cause inflammation and pain in the body. Ibuprofen is used to reduce fever and treat pain or inflammation caused by many conditions such as headache, toothache, back pain, arthritis, menstrual cramps. Jan 21, - No difference whatsoever. It's purely the total amount not the number or size of the pills. The over-the-counter ibuprofen recommended dose is 2 X mg. However, the recommended dose for most uses, when ibuprofen was only by prescription, was mg total or 4 X mg. The reason the drug.
