We included 15 studies from the earlier review and two new studies 17 studies, participants in seven neuropathic pain conditions. The most important message is that amitriptyline probably does give really good pain relief to some people with neuropathic pain, but only a minority of them; amitriptyline will not work for most people. Neuropathic pain is treated by different medicines to those used for pain from damaged tissue. Amitriptyline should continue to be used as part of the treatment of neuropathic pain, but only a minority of people will achieve satisfactory pain relief. For only two of seven studies reporting useful efficacy data was amitriptyline significantly better than placebo very low quality evidence. We cannot trust either figure based on the information available. To assess the analgesic efficacy of amitriptyline for relief of chronic neuropathic pain, and the adverse events associated with its use in clinical trials. This is an updated version of the original Cochrane review published in Issue 12. It is recommended as a first line treatment in many guidelines. Amitriptyline is an antidepressant, and antidepressants are widely recommended for treating neuropathic pain. Amitriptyline has been a first-line treatment for neuropathic pain for many years. Amitriptyline is a tricyclic antidepressant that is widely used to treat chronic neuropathic pain due to nerve damage. Study quality was modest, though most studies were at high risk of bias due to small size. Serious adverse events were rare. In March we performed searches to look for new studies in adults with neuropathic pain of at least moderate intensity. Endep Tablets - Consumer Medicines Information leaflets of prescription and over-the-counter medicines. Endep 10 mg and Endep 25 mg tablets can be used at any stage in the treatment of depression. Learn about amitriptyline ((Elavil, Endep) an antidepressant drug used to treat depression. Drug interactions and Amitriptyline is in the class of drugs called tricyclic antidepressants (TCAs) and is used for treating depression. Other drugs in the are available? PREPARATIONS: Tablets: 10, 25, 50, 75, , and mg. "I took Amitriptyline 10mg for the pain and after 3 days I was completely on edge but also I was in a dark hole that I felt I could never climb out of. I realised that all the anxiety and emotional pain I had those 3 days it was just the amitriptyline, it was not me. I stopped immediately and I was myself again in a couple of days. Along with its needed effects, amitriptyline (the active ingredient contained in Endep) may cause some unwanted effects. Although not all of Nervous system. Common (1% to 10%): Ataxia, disturbance in attention, dizziness, dysarthria/speech disorders, dysgeusia, drowsiness, headache, paresthesia, somnolence, tremors. My doctor recently prescribed me 10mg Amitriptyline nightly to help with sleeping. My nights were disturbed by hot sweats, associated with the menopause and this low dose (20mg is also a low dose -I believe up to mg is prescribed as an anti-depressant) has helped. I still get the night sweats, but find I Amitriptyline 10mg for headaches and anxiety please.
