When the second study failed to show a statistically significant treatment difference between antipsychotic drugs used in combination with Depakote and antipsychotic drugs alone, Abbott waited nearly two years to notify its own sales force about the study results and another two years to publish those results. Abbott trained its sales force to promote Depakote to health care providers and employees of nursing homes as advantageous over antipsychotic drugs for controlling agitation and aggression in elderly dementia patients because Depakote was not subject to certain provisions of the Omnibus Budget Reconciliation Act of OBRA and its implementing regulations designed to prevent the use of unnecessary medications in nursing homes. The civil settlement was reached by the U. The United States contends that this promotion included, in part, making false and misleading statements about the safety, efficacy, dosing and cost-effectiveness of Depakote for some of these unapproved uses, and claiming use of Depakote to control behavioral disturbances in dementia patients would help nursing homes avoid the administrative burdens and costs of complying with OBRA regulatory restrictions applicable to antipsychotics. Abbott has pleaded guilty to misbranding Depakote by promoting the drug to control agitation and aggression in elderly dementia patients and to treat schizophrenia when neither of these uses was FDA approved. The civil settlement addresses broader allegations by the United States that from through , Abbott unlawfully promoted Depakote for unapproved uses, including behavioral disturbances in dementia patients, psychiatric conditions in children and adolescents, schizophrenia, depression, anxiety, conduct disorders, obsessive-compulsive disorder, post-traumatic stress disorder, alcohol and drug withdrawal, attention deficit disorder and autism. The claims settled by the civil agreement are allegations only and there has been no determination of liability, except to the extent that Abbott has admitted facts in the civil settlement agreement or in the criminal plea and agreed statement of facts filed in the criminal action. The FDA is responsible for approving drugs as safe and effective for specified uses. Monday, May 7, The partnership between the two departments has focused efforts to reduce and prevent Medicare and Medicaid financial fraud through enhanced cooperation. The criminal case is being prosecuted by the U. The five-year CIA requires, among other things, that Abbott's board of directors review the effectiveness of the company's compliance program, that high-level executives certify to compliance, that Abbott maintain standardized risk assessment and mitigation processes, and that the company post on its website information about payments to doctors. In an agreed statement of facts filed in the criminal action, Abbott admits that from through , the company maintained a specialized sales force trained to market Depakote in nursing homes for the control of agitation and aggression in elderly dementia patients, despite the absence of credible scientific evidence that Depakote was safe and effective for that use. During this time, Abbott continued to promote Depakote off-label to treat schizophrenia. Some of these unapproved uses were not medically accepted indications for which the United States and state Medicaid programs provided coverage for Depakote. The company entered into contracts that provided long-term care pharmacy providers with payments of rebates based on increases in the use of Depakote in nursing homes serviced by the providers. In addition, from through , the company marketed Depakote in combination with atypical antipsychotic drugs to treat schizophrenia, even after its clinical trials failed to demonstrate that adding Depakote was any more effective than an atypical antipsychotic alone for that use. District Court for the Western District of Virginia. Divalproex ER (Depakote ER) is an expensive drug used to prevent seizures caused by some forms of epilepsy. Generic divalproex er is covered by most Medicare and insurance plans, but some pharmacy coupons or cash prices may be lower. Prices and coupons for 60 tablets of divalproex.
