In Heartgard, it is used as a preventative measure for heart worms in dogs. It is a common dewormer on all sorts of livestock. So for a lbs dog, a dosage of mcg is needed 2. Lots of people on web forums mess up the above calculation. For a 50lbs dog the appropriate dose is , unless otherwise prescribed by a veterinarian. Rated 5 out of 5 by Momo3dogs from Does the job All my three dogs take this and I have never had an issue. Thank you for your question. There are two ways to approach this problem, first we can dilute the solution by 10 to 1 or even to 1 and then calculate the dosage. Luckily for dogs currently getting 10XX the dose needed from uninformed owners, there is a high overdose tolerance. Now seal the jar up and mix. This is not really possible to control half a drop or measure out 0. Now I want to create a mL vial of the diluted solution so I again multiply top and bottom by to get 27,mcg per mL. I am amazed with the amount of misinformation posted by people who flat out do not understand how to calculate dosages. To get rid of the decimal on the bottom, multiply top and bottom by to get mcg per 1mL. Using the smaller syringe you purchased, draw out 0. Active Ingredients per chewable tablet Amount Ivermectin mcg Pyrantel mg. The safe use of this drug has not been evaluated in pregnant or lactating bitches.Generic brands may vary.
