Talk to your doctor, nurse or pharmacist before following any medical regimen to see if it is safe and effective for you. Report spam and other email abuse on the complaints page. Check with your doctor if it is advisable for you to take a replacement dose or not. Create a New Account. If you take more than the recommended dosage within a short span of time, it may lead to an overdose. Closed December 24th 6: It is possible for patients to suffer from other side effects too other than those listed here. The most common allergic reactions include hives, problems breathing, swelling on the face, tongue and throat etc. In most cases doctors may begin with a small dosage and gradually increase the medication once the patient gets used to the medicine. In severe cases of a drug overdose immediate hospitalization may be required. Manitoba pharmacists are not permitted to fill US physicians' prescriptions. There should typically be more than 4 hours between your last dose and next one. Although it is not known if the medicine passes on to the breast milk, it is safer to avoid it if you are nursing a new born baby. However, if you absolutely need to be taking it, then always inform the doctor of your pregnancy and any discomfort as soon as you experience them. If you experience typical symptoms of an overdose like nausea, vomiting, breathlessness, drowsiness or dizziness, seizures or a faint feeling it is advisable to contact your doctor immediately. The medicine primarily consists of propafenone hydrochloride. Sign In to Your Account.
