The generic name is created every time a pharmaceutical company creates a new drug. For example, Claritin is a brand name. A generic drug must have the same active ingredients, dosage form, safety, strength, route of administration, and intended use as the brand-name drug. To view content sources and attributions, please refer to our editorial policy. De verteloptredens worden veelal vergezeld met andere kunstdisciplines, zoals muziek, theater en beeldende kunst. Another example, the active ingredient diltiazem lost its patent protection some years ago. The generic name identifies a drug substance, that is, the active ingredient. The patent for the active ingredient simvastatin expired in July and, now, simvastatin is a generic drug. In other words, loratadine is the active ingredient of drugs that relieve allergy symptoms. These problems may be less likely to occur if blood pressure is controlled. Trademark laws in the United States do not allow the generic drugs to look exactly like the brand-name drugs, but the active ingredients must be the same in both drug preparations, ensuring that both drugs have the same medicinal effects. This can damage the blood vessels of the brain, heart, and kidneys, resulting in a stroke, heart failure, or kidney failure.
