Before you take cephalexin, inform your doctor about any previous adverse reactions you have had to medications, especially cephalosporins and penicillins. Do not take a double dose to make up for a missed one. Do not stop taking this medication without consulting your doctor. Although you may begin to feel better early in your course of treatment with cephalexin, you need to take the full course exactly as directed to finish ridding your body of the infection and to prevent resistant bacteria from taking hold. If you are a breast-feeding mother and are taking cephalexin, it may affect your baby. Talk to your doctor about whether you should continue breast-feeding. If your doctor has recommended a dose different from the ones listed here, do not change the way that you are taking the medication without consulting your doctor. If you become pregnant while taking this medication, contact your doctor immediately. Do not dispose of medications in wastewater e. Protect all forms of this medication from light and moisture, and keep it out of the reach of children. It works by killing the bacteria causing the infection. These factors may affect how you should use this medication. If you are taking any of these medications, speak with your doctor or pharmacist. Your pharmacist may be able to advise you on managing side effects. An interaction between two medications does not always mean that you must stop taking one of them. As well, some forms of this medication may not be used for all of the conditions discussed here. A side effect is an unwanted response to a medication when it is taken in normal doses.

Apr 1, - Overview. Keflex (generic name: cephalexin) belongs to a class of potent antibiotics called cephalosporins.
