Drug names are often subject to legal regulation, including approval for new drugs to avoid confusion with existing drugs and on packaging to establish clear rules about adulterants and fraudulent or misleading labeling. For drugs that make it all the way through development, testing, and regulatory acceptance, the pharmaceutical company then gives the drug a trade name, which is a standard term in the pharmaceutical industry for a brand name or trademark name. Chimeric antibody that responds to more than one antigen [2]. The new study, led by Dr. On some measures, patients taking Crestor did better than those on Lipitor: There are various systems of chemical nomenclature and thus various chemical names for any one substance. Biopharmaceuticals have posed a challenge in nonproprietary naming because unlike smaller molecules made with total synthesis or semisynthesis, there is less assurance of complete fungibility between products from different manufacturers. The data, experts said, suggest that Lipitor and its generic versions will increase dominance of the market. Retrieved 23 November By using this site, you agree to the Terms of Use and Privacy Policy. Participants were randomly assigned to take high doses of either Lipitor 80 mg or Crestor 40 mg daily for two years. Otherwise the 2 names are simply both given, joined by hyphens or slashes. From Wikipedia, the free encyclopedia. Relatedly, they help maintain clear differentiation between proprietary and nonproprietary aspects of reality, which people trying to sell proprietary things have an incentive to obfuscate; they help people compare apples to apples. The World Health Organization administers the international nonproprietary name list. For combination drug products those with 2 or more drugs combined into 1 dosage form single nonproprietary names beginning with "co-" exist in both British Approved Name BAN form and in a formerly maintained USP name called the pharmacy equivalent name PEN.
