Patients taking topiramate should contact their health care professional immediately if they have a loss in vision or experience eye pain. Teri Robert is a leading patient educator and advocate and the author of Living Well with Migraine Disease and Headaches. My personal opinion is that topiramate should not be taken by children who are too young to report side effects if there is any other option. The FDA noted that both generic and branded topiramate come with an important safety warning about metabolic acidosis. Also, topiramate should NOT be abruptly discontinued. The labeling for Topamax and generic topiramate contains an important safety warning about metabolic acidosis, a condition associated with excessive acid in the blood, which can cause symptoms such as tiredness, loss of appetite, irregular heartbeat, and impaired consciousness. John Gever Managing Editor Follow jgever. Topiramate also has been associated with serious eye problems, such as a sudden decrease in vision and a blockage of fluid in the eye, causing increased pressure. These problems can lead to blindness if not treated right away. In addition to his administrative duties, he covers neurology and psychiatry for MedPage Today.
