Regaine active ingredient minoxidil is a lotion applied to the scalp twice daily. Finasteride and Propecia are equally effective at preventing and potentially reversing hair loss. A rash or tenderness around the nipples are also potential side effects for some men. Hair loss caused by male pattern baldness occurs when a hormone called DHT dihydrotestosterone prevents hair follicles from getting the vital nutrients they need to live. There are very few licensed and clinically proven hair loss treatments in the UK. Reducing DHT can stop and even reverse hair loss caused by male pattern baldness. Very few men experience side effects when taking Finasteride. As above, Finasteride is a treatment and not a cure. Finasteride blocks the production of DHT and thus protects the hair follicles that produce hair. Need help with hair loss? Two thirds of men who take Finasteride correctly go on to experience hair regrowth. Modern wigs look very natural and come much cheaper than most treatments. However it is a treatment for hair loss, not a cure: However, all medicines comes with risks and occasionally some men might experience a reduced sex drive or problems ejaculating. However the hair loss will continue. If you stop taking Finasteride the DHP hormone that causes hair loss will eventually return to levels that cause hair loss. For examples, take the tablet at a regular time each day: You must take Finasteride regularly to experience results. To keep the levels of DHP low you must continue to take Finasteride on a daily basis. Finasteride is a prescription-only medication in the UK. It isn't suitable for everyone and a doctor needs to assess whether you can take it. It is only appropriate for the treatment of male pattern baldness and it won't benefit you if you suffer from a different type of hair loss. When you place your order, one of our online doctors.
