If you are chasing the stimulant high, crush the ER. I just wrote about that to summarise what I think is interesting about tramadol. The slower, steady release of tramadol in to the bloodstream leads to much more O-Desmethyltramadol being produced. Well that's nice to hear OP! I have had one seizure I can attribute to tramadol I was pushing the mg limit I may have taken only mg that "day" but I might've exceeded that by mg if you count it as a 24 hour period I really wasn't keeping careful track is my point. It actually starts around mg but below mg it seems to be aggravated by another factor. Lol, yea, all things considered I should be more careful, but I do take some precautions i. Since then, I've been reading up on staggered doses to enhance the effect. Most doctors are oblivious. Wiki Research Mission Statement Donate! I plan on ingesting mg over a couple of hours, first mg, half an hour later - 50mg, then another 50mg and possibly another 50mg, see how I feel. The first two seizures were a year apart. At high doses it doesn't seem to matter. I usually take the 50mg Tramadol capsules to get high. Anyhoo, glad to hear you're doing well op! Again, it is very important to stress the need to start low with a drug like this, as just because not having had a seizure before doesn't guarantee against having on in the future, especially if the tramadol is mixed with other drugs such as amphetamines or alcohol. An extended-release (ER) formulation of tramadol was approved by the US Food and Drug Administration in September In contrast with immediate-release (IR) tramadol, this ER formulation allows once-daily dosing, providing around-the-clock analgesia. In clinical studies, tramadol ER has demonstrated a lower ?Abstract ?Introduction ?Formulation ?Efficacy. Compare prices and print coupons for Tramadol ER (Ryzolt, Ultram ER and ConZip) and other Pain drugs at CVS, Walgreens, and other pharmacies. Prices Our prices often beat insurance co-pays.
