Suicidal thoughts are greatly reduced though not eliminated. I no longer have control of my health and cannot go on depression medications since I do not have a job. The drugs basically kill the imagination so there are no crazy fantasies to cling to. Chris Roller - exhibits symptoms similar to mine. The line represents your mood over an unspecified amount of time.. One of the things I specified from the outset of my treatment was that I start these drugs in a supportive environment which I was not in at the time, nor would be for any of the time I was on Lexapro. When I see a good friend, there is no spike in happiness like there was before the meds. My behavior was erratic, at the church picnic I was blabbing on about writing an article for a tabloid about someone who attempted to reinvent the wheel and failed. Once there I continued to earn my keep as loony by drinking piss. I come up with the idea of controlling a computer using the iPod and scroll wheel. This is totally unusual for me as I am normally a night owl who sleeps in. And it was about this time I thought I was being haunted by spirits.Jun 4, - IWebMD explains how antidepressants and other drugs are combined to treat bipolar disorder I - and what their side effects may be. The use of antidepressants such as SSRIs like Prozac and Lexapro are increasingly discredited for treating bipolar as both ineffective, and dangerous because these antidepressants can trigger mania.
