Average of 90 up to minutes. Breast Implant Type In general, we recommend the use of a cohesive silicone gel implant. Depending on the structural profile of your breast, we can opt for round, natural or anatomical implants, offering better control of the shape of the breast in the long term, especially in relation to the upper pole. Generally, after a period of hours of hospitalization, the patient leaves hospital with only a dressing on the scars affirmed by seamless support. Starting on the 7th day, the points are started. Recovery time is 7 to 14 days. Taking into account the huge variation of the breasts that exist in the population, we realize that a certain type and size of implant should not be indicated for all patients. After 20 days, you can return to your normal activities. The patient uses a bra for 20 days, where he should avoid physical exertion. The drain is usually withdrawn on the 1st or 2nd postoperative day.
