The acetaminophen component in this product is associated with liver toxicity when doses exceed more than 4 grams a day - even less in patients who also drink a lot of alcohol. Advertise Contact Us Permissions. Whereas doctors and pharmacists had looser rules for Schedule III, for example allowing refills, Schedule II prohibits refills and generally makes prescriptions it much more difficult to handle for doctors and pharmacists. To pay less, the patient literally has to go back to their doctor to get a new prescription. The Vicodin product manufacturer notified the healthcare community out about this formulation change, mentioning that all strengths of hydrocodone will now be combined with mg of acetaminophen. It generally is at the top of the charts as the first or second most widely sold medicine. Some were taking several tablets a day and even mixing in over-the-counter acetaminophen products, far exceeding the 4 gram limit. However, it appears that some diverted CPD prices may have increased slightly, according to law enforcement reporting in July The drug is actually a combination of the opioid hydrocodone along with acetaminophen, a nonprescription analgesic. Sources are listed at the end of this assessment. So in , in the name of liver safety, FDA asked companies to change their formulation , cutting back on the amount of acetaminophen in Vicodin-like products to mg or less per tablet. It is possible that these dealers have increased street prices to reflect that risk. There were also generic products with mg and they continue to be available at low cost. Patients must obtain an original prescription from their doctor each time they need a new supply.
