Terramycin with Polymyxin B Sulfate Ophthalmic Ointment is well tolerated by the epithelial membranes and other tissues of the eye. If superinfection occurs, the antibiotic should be discontinued and appropriate specific therapy should be instituted. This drug is contraindicated in individuals who have shown hypersensitivity to any of its components. Prescribing Terramycin in the absence of proven or strongly suspected bacterial infection or a prophylactic indication is unlikely to provide benefit to the patient and increases the risk of the development of drug-resistant bacteria. Patients should be counseled that antibacterial drugs including Terramycin should only be used to treat bacterial infections. To view content sources and attributions, please refer to our editorial policy. When Terramycin is prescribed to treat a bacterial infection, patients should be told that although it is common to feel better early in the course of therapy, the medication should be taken exactly as directed. It is particularly effective against Pseudomonas aeruginosa B. Terramycin with Polymyxin B Generic Name: To reduce the development of drug-resistant bacteria and maintain effectiveness of Terramycin and other antibacterial drugs, Terramycin should be used only to treat or prevent infections that are proven or strongly suspected to be caused by susceptible bacteria. This action is exclusively against gram-negative organisms. No Reviews - Be the first! Print this page Add to My Med List. In the absence of such data, local epidemiology and susceptibility patterns may contribute to the empiric selection of therapy. Subscribe to receive email notifications whenever new articles are published. Not Rated - Be the first! There is thus made available a particularly effective antimicrobial combination of the broad-spectrum antibiotic Terramycin as well as polymyxin B sulfate against primarily causative or secondarily infecting organisms.
