Reapply the preparation leaving a thin coating on the lesion, cover with pliable nonporous film, and seal the edges. The more potent corticosteroids have been shown to be teratogenic after dermal application in laboratory animals. It is not known whether topical administration of corticosteroids could result in sufficient systemic absorption to produce detectable quantities in breast milk. Therefore, topical corticosteroids should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus. Infrequently, signs and symptoms of steroid withdrawal may occur, requiring supplemental systemic corticosteroids. Triamcinolone topical Rating 43 User Reviews 8. If an infection develops, the use of occlusive dressings should be discontinued and appropriate antimicrobial therapy instituted. If a favorable response does not occur promptly, the corticosteroid should be discontinued until the infection has been adequately controlled. The extent of percutaneous absorption of topical corticosteroids is determined by many factors including the vehicle, the integrity of the epidermal barrier, and the use of occlusive dressings. In the presence of dermatological infections, the use of an appropriate antifungal or antibacterial agent should be instituted. There are no adequate and well-controlled studies in pregnant women on teratogenic effects from topically applied corticosteroids. Administration of topical corticosteroids to children should be limited to the least amount compatible with an effective therapeutic regimen. Available for Android and iOS devices. Learn about Triamcinolone Cream (Triamcinolone Acetonide Cream) may treat, uses, dosage, side effects, drug interactions, warnings, patient labeling, reviews Stop using this medication and call your doctor at once if you have any of these signs that you may be absorbing triamcinolone topical through your skin or gums.
