The contraceptive injection can be a great alternative to the contraceptive pill - especially for people who are forgetful. The contraceptive injection works just like a mini pill. The biggest advantage of the contraceptive injection is convenience - all you need to do is get the injection every 12 weeks. Most women who use the injection are on Depo Provera. Just like the contraceptive pill, it contains hormones which prevent pregnancy. It can take a while before you are fertile again. What are the disadvantages? The injection is not suitable for everyone and your GP will have a consultation with you to determine whether you can use it or not. Although it is only as effective as the pill on paper, in reality it tends to be safer as most women forget to take the pill on time now and then. A meta-analysis of observational studies. Depo-Provera doesn't protect against sexually transmitted infections. If you're concerned about HIV, talk with your health care provider. Hormonal contraceptive use and women's risk of HIV acquisition: Is the injection suitable for all women? It is possible, so you should use extra contraception if you do not want to become pregnant. Medroxyprogesterone acetate is also available in a lower dosage. In some cases, it is possible to use the contraceptive injection during breastfeeding. Other side effects of Depo-Provera usually decrease or stop within the first few months. How do I get the birth control shot? You can visit your doctor or your nearest Planned Parenthood health center to get the shot. How much does the birth control shot cost? The birth control shot (sometimes called Depo-Provera, the Depo shot, or DMPA) contains the hormone progestin. Progestin stops you from getting pregnant by preventing ovulation. When there's no egg in the tube, pregnancy can't happen. It also works by making cervical mucus thicker. When the mucus on the cervix is. Nov 16, - So maybe you've heard of the birth control shot, a.k.a. Depo, Depo-Provera, or DMPA. Most people If you decide you want to try SubQ Depo, talk to your health care provider to get a prescription. There are only a few things you'll need to give yourself the shot, and you can get them all at the pharmacy. Do not have any kind of sex without using a latex or polyurethane condom. Do not share WHAT DO I NEED TO TELL MY DOCTOR BEFORE I TAKE THIS DRUG? For all patients taking Tell your doctor and pharmacist about all of your drugs (prescription or OTC, natural products, vitamins) and health problems. You must. This is a prescription medication and must be ordered by a doctor or nurse practitioner. The injection is usually given in the office by a nurse. There is a different brand that can be administered by patients at home, called Depo-subQ Provera Patients will need teaching on how to give themselves the shots before they. Depo-Provera works for about 3 months at a time. To prevent pregnancy, you have to get 1 shot from your doctor 4 times a year, about 12 to 14 weeks apart. If you get it in the first 7 days of your cycle, it works right away. If you don't, you'll need to use another form of birth control for 1 week. Your doctor will confirm you are not. Depo Provera injection mg is used for contraception, to treat endometriosis and endometrial, renal and breast cancers, also to induce breast development in transgender hormone therapy. Its active ingredient is Medroxyprogesterone and you can buy Depo Provera online from unahistoriafantastica.com Jan 31, - Injection therapy - Nur Isterate, and Depo Provera. In the Private sector the commonly prescribed pill is Yasmin and the Dianne and the Dainne generic. I'm also on yasmin z - only time they ask for prescription is when i want on medical aid (so i do have a prescription because of that). but when i'm on. Jump to Are there any other precautions or warnings for this medication? - By Month 12, about 55% of women no longer have periods, and by Month 24, about 68% of women using medroxyprogesterone do not have periods.
