If your primary symptom is a stuffed up nose, you can also ask your doctor about decongesting nasal sprays. Sakina Bajowala, an Illinois-based allergist, explains. If you can't, consider an allergy medication with an added decongestant. Allegra is the least likely to make you drowsy. Don't hesitate to use generic brands. It's the one that gives you the individual the greatest relief with the fewest side effects at the lowest price. Pseudoephedrine's usefulness when making methamphetamine means that in the United States, these drugs need to be purchased directly from the pharmacist with a government ID. This may sound obvious, but the key thing to pay attention to is not what's written on a box, but what actually works for you. Second-generation over-the-counter medications like Claritin, Zyrtec, and Allegra which improve upon old options like Benadryl by not putting you to sleep are more similar than they are different. Most require a prescription, but Nasacort is one that just became available over the counter. A doctor can also talk to you about prescription antihistamines, and if your symptoms persist immunotherapy, which can help desensitize you to what's causing a reaction in the first place. Most importantly, talk to your pharmacist and a board-certified allergist. Of course, it is always a good idea to talk to your doctor before trying any new medication. Claritin-D, Allegra-D, and Zyrtec-D all contain a decongestant called pseudoephedrine, the same active ingredient that powers Sudafed. That said, they do have some very slight differences which probably aren't noticeable to every user. With or without a decongestant, Allegra, Claritin, and Zyrtec are all antihistamines, meaning they calm down your body's immune reaction to allergens like pollen or animal dander. It makes your nose feel less stopped up by narrowing the blood vessels inside your nostrils.
