You may be asked to defend your choice of DOI. Join Our Mailing List. First Aid Incidents vs. Therefore a "prescription" for mg ibuprofen is not recordable unless you tell the patient to take 3 pills at a time a prescription dose of a non prescription medication. The answer to your question is that giving a medication, dose or a treatment that "requires a prescription" makes an injury "recordable" under OSHA guidelines. OSHA defines work-related injuries, illnesses, and fatalities are those in which an event or exposure in the work environment either caused, or contributed to, the condition. Sign up for our blog to stay up to date with the latest Employer news. What is Utilization Review? The bottom line is that treating a simple first aid incident by any other means than those specifically classified as first aid transforms that incident into one that must be recorded in your OSHA Log an important technicality to be aware of to avoid inadvertently running afoul of OSHA record keeping requirements. Read more at <http://> Remember that this worker may have been doing full duty up to the time of the visit and may deserve a trail of treatment without restrictions initially. If such an event or exposure significantly aggravated a pre-existing injury or illness, this is also considered work-related. OSHA regulations require employers to prepare and maintain records of serious occupational injuries and illnesses. Under her leadership, ErgoScience continues to use the science of work to improve workplace safety, productivity and profitability. Deborah Lechner, ErgoScience President, combines an extensive research background with plus years of clinical experience. For example, a secretary who is told not to lift 50 pounds would not generally trigger recordability. Incidents that only require first aid treatment are not considered serious by the agency and do not need to be recorded. A worker who reports his traumatic injury occurred on a prior date establishes that date as the "date of injury" and may not be restricted balance of shift without triggering recordability. An example would be a prescription, or recommendation, for ibuprofen mg (the OTC form), 4 tablets three times daily for a total of mg, where the Any use of nonprescription medications is considered first aid for OSHA recordkeeping purposes, even when used at prescription strengths (See page May 5, - However, from the documentation enclosed in your letter, the strength and dosage of the Motrin dispensed is unclear. If Motrin ( mg) was dispensed, then the treatment for the injury was still first aid and the case is not OSHA recordable. But, if prescription strength Motrin ( mg, mg, or The answer to your question is that giving a medication, dose or a treatment that "requires a prescription" makes an injury "recordable" under OSHA guidelines. Therefore a "prescription" for mg ibuprofen is not recordable unless you tell the patient to take 3 pills at a time (a prescription dose of a non prescription. 1 dose prescription med is Medical Treatment. - Over the Counter non-prescription med at non-prescription strength is First Aid.
