There was no evidence of hepatotoxicity and one patient stopped itraconazole due to a rash. It may be concluded that the absorption of oral itraconazole capsules is reduced in AIDS patients, by a factor of approximately 50%, when compared with normal volunteers. AIDS patients may require higher doses of itraconazole. Abstract. Abstract To test the hypothesis that absorption of orally administered itraconazole may be reduced in patients with the Acquired Immunodeficiency Syndrome (AIDS), 8 patients with AIDS were given two mg capsules of itraconazole for 15 days. Plasma levels were measured by HPLC hourly for the first 8 h. The pharmacokinetics of itraconazole formulated in a hydroxypropyl- $\beta$ -cyclodextrin oral solution was determined for two groups of human immunodeficiency virus (HIV)-infected adults with oral candidiasis. (group A, 12 patients with CD4 T-cell count of  $>/\text{mm}^3$  and no AIDS, and group B, 11 patients with CD4. T-cell count. The pharmacokinetics of itraconazole formulated in a hydroxypropyl-beta-cyclodextrin oral solution was determined for two groups of human immunodeficiency virus (HIV)-infected adults with oral candidiasis (group A, 12 patients with CD4+ T-cell count of  $>/\text{mm}^3$  and no AIDS, and group B, 11 patients with CD4+ T-cell. Abstract. The pharmacokinetics, efficacy, and safety of intravenous (iv) itraconazole (2 days at mg/day, 12 days at mg/day), followed by 12 weeks of oral capsules ( mg/day) were studied in 31 immunocompromised patients with pulmonary invasive aspergillosis. All patients received iv itraconazole (median. Jump to Pharmacokinetics - Pharmacokinetics. Fluconazole. Adults. Fluconazole is water soluble and available in oral capsule, oral solution and saline-based iv solution owing to chemotherapy before autologous bone marrow transplantation11 and AIDS;12 wide inter-patient variation, nevertheless, remained. Abstract. Objective: To investigate the effects of rifampicin on the pharmacokinetics of itraconazole in humans. Methods: Our study was conducted with six healthy normal volunteers and three AIDS patients. All subjects received a mg single dose of oral itraconazole on day 1 and day 15 and mg of oral rifampicin.
