Morphine Interaction with Prasugrel: Determine the immediate treatment necessary, rapidly assess reperfusion eligibility, and administer necessary adjunctive treatments. November 5, Background: Am Heart J No statistical difference in pain reduction No statistical differences in hypotension morphine 5. Prehosp Emerg Care IV morphine decreases and delays ticagrelor effects, but this does not seem to decrease antiplatelet effects in healthy volunteers. EM by Salim R. Give the patient a nitroglycerin tablet every 3 to 5 minutes for ongoing pain AND if permitted by protocol. Morphine Decreases Clopidogrel concentrations and Effects:remember the initial treatment for acute coronary syndrome. MONA stands for morphine, oxygen, nitroglycerin and aspirin (MONA greet chest pain patients at the door). It is important to understand that the acronym represents the steps in treatment, but not necessarily the order in which they are administered. To the Editor: The mnemonic, MONA, which stands for morphine, oxygen, nitroglycerin, and aspirin, is used to recall the initial management of patients with chest pain (ie, suspected acute coronary syndrome). However, in the era of evidenced-based medicine, a review of this mnemonic is needed (Fig. 1). Although. Nov 2, - To the Editor: The mnemonic, MONA, which stands for morphine, oxygen, nitroglycerin, and aspirin, is used to recall the initial management of patients with chest pain (ie, suspected acute coronary syndrome). However, in the era of evidenced-based medicine, a review of this mnemonic is needed (Fig. 1) Fig. Nov 2, - Acute Coronary Syndrome/complications; Acute Coronary Syndrome/therapy\*; Aspirin/pharmacology\*; Chest Pain/etiology; Chest Pain/therapy\*; Evidence-Based Emergency Medicine/methods; Evidence-Based Emergency Medicine/trends; Humans; Morphine/pharmacology\*; Nitroglycerin/pharmacology\*. Dec 4, - For many years, a standard treatment of providing morphine, oxygen, nitroglycerin, and aspirin (MONA) was the standard initial treatment approach for all patients presenting with chest pain due to suspected myocardial ischemia. In this patient, I think the correct approach would be to just give aspirin. Via unahistoriafantastica.com, I was told that Aspirin always comes first, basically that you do the acronym backwards. 3). Via the NCLEX review here, I got a question The rationale stated that morphine sulfate should be given first, in order to decrease cardiac oxygen demands. Can anyone help me out regarding what the. Many healthcare providers use the acronym MONA to help them remember the initial medical treatment options for a patient with ACS. M: morphine. O: oxygen. N: nitroglycerin. A: aspirin. But keep in mind that while MONA might be easy to remember, the drugs aren't given in the MONA sequence. They're given in the order. angina includes aspirin, oxygen, nitroglycerin, and morphine sulfate (see Tables 2 and 3). Nurses can use the mnemonic MONA to recall these initial treatment strategies (although MONA doesn't specify the correct order). Patients should be given to mg of aspirin by mouth (crushed or chewed) as soon as possible. Dec 11, - Initial therapy for ACS should focus on stabilizing the patient's condition, relieving ischemic pain, and providing antithrombotic therapy to reduce myocardial damage and prevent further ischemia. Morphine (or fentanyl) for pain control, oxygen, sublingual or intravenous (IV) nitroglycerin, soluble aspirin. The patient has a valid DNAR order the BLS ambulance provider should administer Aspirin ALS provider should administer MONA (morphine, oxygen, nitroglycerin and.
