Clonidine may pass into your breast milk and can cause side effects in a breastfeeding child. If you take these drugs with clonidine, you may get dizzy or have trouble balancing when you sit after lying down, or stand after sitting. It may slow your reflexes, cause poor judgment, and cause sleepiness. This is called orthostatic hypotension. Clonidine extended-release tablets are available as the brand-name drug Kapvay. If you have kidney disease, your starting dosage may be lower. For people with heart problems: Serious side effects can include:. Combining these drugs with clonidine may lower your blood pressure too much. Taking oral clonidine after having a skin reaction to the clonidine patch can cause a rash over your whole body, itching, and possibly a severe allergic reaction. Clonidine should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus. For women who are breastfeeding: The form you use may depend on your condition. These can increase your dizziness and risk of fainting. Please choose to continue your session or sign out now. This information is not a substitute for medical advice. The lowest GoodRx price for the most common version of clonidine is around \$, 63% off the average retail price of \$ Compare central alpha agonists. Prescription Settings. generic.
