Heartburn occurs as a result of gastric acid flowing from the stomach into the esophagus, causing irritation that often manifests as a burning sensation in the chest. Taking a daily acid reducer, such as Prilosec OTC, eliminates the need for a restricted diet and unpleasant tasting antacids. There are a number of harmful effects of Prilosec. Sign up for the PharmacyTimes Newsletter. Deals at this store. At times, it is also prescribed along with antibiotics to treat stomach ulcers arising due to *Helicobacter pylori* infections. Armstrong et al conducted a study to test the hypothesis that the greater acid suppression produced by esomeprazole would produce heartburn relief in a greater proportion of patients than omeprazole after 4 weeks of therapy. Guidelines recommend the lowest effective dose over the shortest duration necessary to control symptoms. The results showed, however, that greater acid suppression may not correlate with more effective symptom relief in patients with endoscopy-negative reflux disease. Uneven and fast heart rate, muscle weakness, diarrhea, coughing and choking, headache and troubles in memory are some of the serious side effects.
