The main active ingredient is micronized salbutamol sulfate. During pregnancy, Ventolin is prescribed only in situations where the expected benefit to the mother exceeds the potential threat to the fetus. As a result, there are transient side effects - tachycardia, muscle tremors, lowering of blood pressure, nausea and vomiting. The complete structural analogues of Ventolin containing salbutamol are preparations: Aerosol for inhalation Ventolin is stored in a place protected from direct sunlight, inaccessible to children. Reduces resistance in the airways, increases the vital capacity of the lungs. The rest falls into the oropharynx, swallows, settles on the inhaler. Shelf life of the aerosol is 2 years. The Ventolin aerosol user guide Content: Before the first use of aerosol or after a long break in treatment a week or more , it is recommended to remove the cap from the mouthpiece, squeezing it from both sides to shake the inhaler well. When large doses of salbutamol are administered, hypokalemia may develop, so it is recommended that the level of potassium in the blood plasma be monitored during treatment. Ventolin aerosol user guide Form of issue and composition pharmacologic effect Indications for use Contraindications Dosing and Administration Side effects special instructions Ventolin analogues Terms and conditions of storage Ventolin price. If you need aerosol treatment, you need to stop breastfeeding. Accordingly, there is no precise data on the effect of Ventolin on the fetus. Causes the enlargement of the coronary arteries.
