Available for Android and iOS devices. If you're shopping for allergy medication, we'll assume your eyes are itchy, your nose is running, and you can't stop sneezing. Ask your doctor before taking Claritin-D with a sleeping pill, narcotic pain medicine, muscle relaxer, or medicine for anxiety, depression, or seizures. Use loratadine mainly if drowsiness from Benadryl interferes with function. Always ask a doctor before giving a cough or cold medicine to a child. Treatment of nasal or eye allergies, hives, itching and other allergic symptoms. Doesn't control allergy symptoms as well as older allergy medicines. Histamine can produce symptoms of sneezing, itching, watery eyes, and runny nose. MAO inhibitors include isocarboxazid, linezolid, methylene blue injection, phenelzine, rasagiline, selegiline, tranlycypromine, and others. Skip the missed dose if it is almost time for your next scheduled dose. Do not use in larger or smaller amounts or for longer than recommended. Other drugs may interact with Claritin-D, including prescription and over-the-counter medicines, vitamins, and herbal products. Look below the correct age for the dose based on the product you have. To view content sources and attributions, please refer to our editorial policy. You just have to answer a couple of basic questions to figure out which to choose. Do not take extra medicine to make up the missed dose. Of course, it is always a good idea to talk to your doctor before trying any new medication. This may sound obvious, but the key thing to pay attention to is not what's written on a box, but what actually works for you. Taking certain products together can cause you to get too much of a certain drug. See images of Loratadine (Claritin), including the medication and its packaging.
