Effexor and Serzone generally do not cause weight gain, while Wellbutrin can cause weight loss. Use of the drugs rose percent over the past two decades, making them the most frequent prescription for Americans ages 18 to The tricyclic antidepressants nortriptyline and amitriptyline were also linked with significantly less weight gain than the SSRIs. It didn't initially show up in the clinical trials because most of them were eight to 12 weeks in length, and the weight gain generally occurs with longer use. More than 60 percent of Americans taking antidepressants have been on them for two years or longer, and 14 percent have taken the drugs for 10 years or more, according to the CDC. Continued Antidepressants and Weight Gain: Other antidepressant medications, including tricyclics like Elavil and Tofranil and MAO inhibitors drugs like Parnate and Nardil, may also cause patients to gain weight with both long-term and short-term use. At the same time, the obesity rate has swelled, with more than one-third of U. One possible reason is that the antidepressants interfere with the neurotransmitter serotonin which has a role in controlling and regulating appetite. So far, no drugs including weight loss drugs have been sufficiently tested to be approved for use in managing weight gain from psychiatric medications. Consequently, researchers have trouble untangling the effects of medication and the effects of depression on weight, Perlis said. Weight Gain and Antidepressants: In one large study of more than 3, Finnish men and women published in the journal Preventive Medicine, researchers found that those who exercised at least two to three times a week experienced significantly less depression, anger, and stress than those who exercised less frequently or not at all. The worst offenders in regards to weight gain were mirtazapine Remeron and paroxetine hydrochloride Paxil. Doctors also know that some people lose their appetite when they are depressed while other people get hungrier. Perlis and one of his co-authors have consulted for and received funding from numerous antidepressant drug manufacturers. Antidepressants and Weight Gain: Some people gain weight and others lose weight as a result of depression.
