Lot numbers of affected packs are as follows: The packs were distributed nationwide between Sept. For the second time this year, certain birth control medications are being recalled over a packaging error. The drug company issued the order after finding that some packages had too many active tablets, while others had too few. Signs and symptoms of the contagious virus 5 He's 16 and he's gigantic: The pills were rotated degrees within the pack, so the weekly tablet orientation is reversed, and the lot number and expiration date are visible only on the outer pouch, according to the FDA. If your result is negative, your doctor will likely tell you to come in for an exam and advise you to use condoms or another form of non-hormonal birth control until you start a new pack of prescribed pills. Facebook 0 Twitter 0 livefyre Email Print. The error was discovered when a consumer complained she received a pack in which the tablets were packaged in reverse order, the FDA said. He or she can help you ascertain whether your pill pack is affected. Adam Jacobs, assistant professor of obstetrics, gynecology and reproductive science at Mount Sinai Medical Center, told Everyday Health. In these specific recalled pills, 21 tablets contain hormonal compounds to prevent pregnancy, while the last seven tablets don't contain any active ingredients. Glenmark Generics explained how the error occurred: Then look at the package and check the lot numbers. Glenmark Generics is issuing a nationwide recall of seven lots of birth control pills. Any pack for which the lot number and expiry date is not visible is subject to recall. If this is the case, patients may be experiencing irregular bleeding and may be at higher risk for unintended pregnancy." Dr. You can see if yours is one of the recalled ones by looking at the FDA. If a woman takes the pills out of order or takes inactive pills thinking they are active, she may be at risk of pregnancy.
