Because the disorder is so often misdiagnosed, patients are often wrongly treated with antidepressants alone, which can make the problem worse, the professor of psychiatry tells WebMD. Mar 15, - Benazzi writes that patients who show symptoms of what appears to be depression should be evaluated for manic or hypomanic symptoms. If bipolar disorder is diagnosed, treatment should include mood-stabilizing drugs like lithium, with or without antidepressants. The widespread use of antidepressants. My psychiatrist said no more SSRIs for me, and they generally aren't recommended for Bipolar. Now I wish I could have some of the anti-anxiety effects of Zoloft, but that benefit is not worth the risk. Zoloft gave me slight sexual side effects, overeating, and minor headaches. That being said, it is a miracle for some." Jun 26, - This drug profile of Zoloft discusses its uses, how it works, possible side effects, and what to know about its use with bipolar disorder. I was doing some research on Zoloft and Bipolar and while I know that all meds have their "scary" side effect warnings this one surprised me. It states: Comments: While Zoloft (sertraline hydrochloride) is no more likely to trigger mania than any other SSRI, for some reason the symptoms it triggers seem a. Don't know about the effects of zoloft on Bipolar depression per se, but it is well known that zoloft when given to children and teenagers as a treatment for depression can cause a worsening of depression and suicidal thoughts. In the US, the FDA strongly recommends close observation of young patients for. SSRIs are used in the treatment of bi polar for the anti depression properties, if they make your mania worse your psychiatrist will add in a 'mood stabilizer' its common practice so don't worry about it. I was diagnosed with bipolar disorder at 14, however refrained from being medicated until I was Mar 6, - Like most medications in its class, Zoloft can potentially cause any of several negative side effects. The most serious are the following: Increased suicidal thoughts in children or teens: Clearly there is an increased risk of suicide and suicidal thinking in people with bipolar and depression as a whole. A large. Mood destabilization with antidepressants should be distinguished from an acute manic switch. Antidepressant-induced mania, or switch, is a short-term phenomenon; one might define it as happening within 2 months of the beginning of antidepressant treatment. Mood destabilization is a long-term phenomenon, reflecting. My psychiatrist misdiagnosed me as having a personality disorder. I went off of my Zoloft cold turkey, threatened my psychiatrist that I was going to give him a mental illness with a baseball bat and took off to save the world. I didn't know. He knew that studies have been done on the effects of sugar on the bipolar brain. That was about a month ago and my doc said to cut the pill down to 1/2 and go from there but I am scared to take it

zoloft side effects bipolar disorder

because I don't like the side effects and the long term side effects. Yes as people said the problem does not appear to be that the Zoloft is worsening anything but that you actually have bipolar disorder.
