SSRIs are equally effective as other antidepressants and have a favourable risk/benefit ratio. Options for local implementation Evidence context Prescribing data Update information About this key therapeutic topic. Prescribing data suggest that there is variation in antidepressant prescribing across localities. The NICE guideline on depression in adults recommends that duloxetine should not be prescribed for adults with depression because evidence supporting its tolerability relative to other antidepressants is outweighed by the increased cardiac risk and toxicity in overdose. The NICE guideline on common mental health disorders brings these recommendations together and can be used to help clinicians, commissioners and managers develop effective local care pathways for such people. In addition, the November edition of Drug Safety Update issued a reminder to test liver function before and during treatment with agomelatine. In view of the NICE guideline on common mental health disorders, a review of local antidepressant prescribing is advised. NICE advocates a stepwise approach to managing common mental health disorders. Drug safety warnings on antidepressants that have been issued by the MHRA should be considered. Informed consent should be obtained and documented. Neither escitalopram nor any of the available 'dual action' antidepressants, such as venlafaxine and duloxetine, were judged to have any clinically important advantages over other antidepressants. It recommends offering, or referring people for, the least intrusive and most effective intervention first. The NICE quality standards on depression in adults, depression in children and young people, and anxiety disorders describe concise sets of prioritised statements designed to drive measurable quality improvements within these areas. See also specific NICE guidelines on antenatal and postnatal mental health, depression in children and young people recommendations on psychological therapies and antidepressants were updated in March and social anxiety disorder. The use of antidepressants in adults with depression or generalised anxiety disorder GAD has been addressed by the NICE guidelines on depression in adults which is being updated; publication expected May, depression in adults with a chronic physical health problem and GAD and panic disorder in adults. If an antidepressant is indicated for an adult with depression, the NICE guideline on depression in adults recommends that it should normally be a selective serotonin reuptake inhibitor SSRI in generic form. Evidence context The use of antidepressants in adults with depression or generalised anxiety disorder GAD has been addressed by the NICE guidelines on depression in adults which is being updated; publication expected May, depression in adults with a chronic physical health problem and GAD and panic disorder in adults. As with depression, drug choice in GAD should also be influenced by several other factors relating to the individual person, including their previous experience of treatments, likely drug interactions, safety and tolerability. Reviews and ratings for lexapro when used in the treatment of generalized anxiety disorder. reviews submitted. Reviews and ratings for escitalopram when used in the treatment of generalized anxiety disorder. reviews submitted. For Generalized Anxiety Disorder "Hi all, coming up to week 6 on Lexapro 15mg. First few weeks were absolute hard work. Since starting I've been experiencing shakes, twitches, brain fog and derealisation/depersonalisation which has been really awful. I am also currently on seroquel (quetiapine) 25mg in the mornings. Reviews and ratings for lexapro when used in the treatment of anxiety. reviews submitted. Baldwin DS, Nair RV.
