Passage of liquid feed through the oesophageal groove in preruminant and ruminant calves. Digestive secretions in preruminant and ruminant calves and some aspects of their regulation. The main role of the gastrointestinal GI tract is to transform the ingested diet into nutrients that can be absorbed across the GI wall to the blood circulation in order to supply body tissues with essential energy and structural components. Eighteen male calves had rumen cannulae. Pharmacokinetics of three sulfonamides in ruminant and preruminant kids. Responses of serum folates of preruminant and ruminant calves to a dietary supplement of folic acid. Pharmacokinetics of three sulphonamides in ruminant and preruminant kids. Pharmacokinetics and distribution in interstitial and pulmonary epithelial lining fluid of danofloxacin in ruminant and preruminant calves. Polyethylene glycol was introduced into the rumen by the cannula as a marker to measure the volume of liquid in the rumen, or into the feed to measure its concentration in rumen fluid immediately after The effect of dietary supplemental folic acid on serum folates of preruminant and ruminant calves was studied. Pharmacokinetics of intravenous and oral meloxicam in ruminant calves. Pharmacokinetics and effect of intravenous meloxicam in weaned Holstein calves following scoop dehorning without local anesthesia. Johann F Coetzee Email author.; Ruby A Mosher.; Butch KuKanich.; Ronette Gehring.; Brad Robert.; J Brandon Reinbold and; Brad J White. BMC Veterinary Research Aug 28, - This project was supported by Agriculture and Food Research Initiative Competitive Grant no. and no. from the USDA National Institute of Food and Agriculture and Award Number T35RR from the National Center For Research Resources. Oct 27, - The aims of the investigation were to establish for the first time (i) clinical efficacy and (ii) pharmacokinetic profile of meloxicam intravenously (IV) administered in male Mediterranean buffalo calves after surgical orchietomy. The study was performed on 10 healthy buffalo calves, between 4 and 5 months.
