Journal of Medical Toxicology. Metoprolol is used alone or together with other medicines to treat high blood pressure hypertension. A lower blood pressure can reduce the risk of strokes and heart attacks. Side effects, especially with higher doses, include dizziness, drowsiness, fatigue, diarrhea, unusual dreams, trouble sleeping, depression, and vision problems. In addition, metoprolol is used to treat patients with heart failure. It is given to people who have already had a heart attack. Drugs and Supplements Metoprolol Oral Route. Metoprolol is on the World Health Organization's List of Essential Medicines , the most important medications needed in a basic health system. Excessive doses of metoprolol can cause severe hypotension, bradycardia, metabolic acidosis , seizures, and cardiorespiratory arrest. Mayo Clinic does not endorse companies or products. Retrieved Apr 21, Metoprolol (Lopressor) is an inexpensive drug used to treat high blood pressure and to prevent chest pain. It is also used after a heart attack to prevent an additional heart attack from occurring. This drug is more popular than comparable drugs. It is available in brand and generic versions. Generic metoprolol is covered by ?Blackbox Warning ?Overview ?Proper Use ?Dosing. By designating a single reference listed drug as the standard to which all generic versions must be shown to be bioequivalent, FDA hopes to avoid possible significant variations among generic drugs and their brand name counterpart. AB, Products meeting necessary bioequivalence requirements. Multisource drug. Physician reviewed Lopressor patient information - includes Lopressor description, dosage and directions.
