Courses were developed especially for physicians by business health experts and experienced physicians. Two months later, the patients underwent psychological testing, and researchers found almost all patients had some symptoms of PTSD, but the severity of symptoms was twice as high among those that hadn't taken Inderal. In this study, which appears in the Nov. Akrimax Patient Assistance Program. Propranolol is a member of the group II antiarrhythmics drug class and is commonly used for Angina, Anxiety, Aortic Stenosis, and others. Researchers say this is the second study to look at the effects of using Inderal after traumatic injury, and the findings may show that the drug may be useful for reducing PTSD symptoms and perhaps even preventing PTSD from occurring in people at risk for the disorder. Please seek medical advice before starting, changing or terminating any medical treatment. Choose courses based on your needs. Return Form Please include any applicable Akrimax prescription s and income documentation.
