Tier 1 labeling means that a product is formulated with physico-chemical barriers to abuse. Based on the results of these studies, Hysingla ER is recognized by the FDA as having abuse-deterrent properties that are expected to deter misuse and abuse via chewing, snorting and injection, resulting in Tier 1 and 3 abuse-deterrence labeling. Decreased Bowel Motility Hysingla ER is contraindicated in patients with gastrointestinal obstruction, including paralytic ileus. In addition, discontinuation of a concomitantly used cytochrome P 3A4 inducer may result in an increase in hydrocodone plasma concentration. Addiction can occur at recommended doses and if the drug is misused or abused. Opioids may obscure the clinical course in a patient with a head injury. The methodology and results of these studies are summarized in section 9. Because of the risks of addiction, abuse, and misuse with opioids, even at recommended doses, and because of the greater risks of overdose and death with extended-release opioid formulations, Hysingla ER should be reserved for use in patients for whom alternative treatment options e. To gain Tier 1 labeling, data from laboratory manipulation and extraction studies that assess how the abuse-deterrent properties of a formulation can be defeated or compromised are provided to the FDA. Driving and Operating Machinery Hysingla ER may impair the mental or physical abilities needed to perform potentially hazardous activities such as driving a car or operating machinery. Hysingla ER does not contain acetaminophen, the overuse of which has been reported to be a leading cause of acute liver failure in the United States. Monitor patients with biliary tract disease, including acute pancreatitis. Start with a lower Hysingla ER dose than usual i.
