When patients are on maintenance medication for which a generic is available, they might be given a different version of the generic drug when refilling their prescriptions. A pharmacy might stock one generic for a few months, and then switch to another a few months later, if the store is offered a better deal on it. Neurologists who treat epilepsy have similar concerns. Graedon and the lab conjecture that the different dissolution rates might be to blame for the reported side effects and lower effectiveness of Budeprion. But there is a gnawing concern among some doctors and researchers that certain prescription generic drugs may not work as well as their brand-name counterparts. Graedon has been hearing complaints on his Web site about generic forms of the antidepressant Wellbutrin XL known as Budeprion XL in one generic form, the heart medicine Toprol XL metoprolol succinate and the antiseizure medicine Keppra levetiracetam. The American Medical Association concurs. A pharmacist is not required to notify the patient of the change, although some choose to do so. She says her condition has once again stabilized.
