Each anticonvulsant may have slightly different side effects. Don't take any other substance during treatment without talking with your doctor. Other anticonvulsants are less well-established for treating mood symptoms in bipolar disorder, and some -- such as Neurontin, Lyrica, or Topamax -- are also used "off label" for other types of problems such as anxiety or weight loss. Be sure to tell your doctor about any drugs, herbs, or supplements you take. Some anticonvulsants can cause problems with the liver over the long term, so your doctor may monitor your liver periodically. Anticonvulsants used to treat bipolar disorder include: Most of these side effects lessen with time. Anticonvulsants work by calming hyperactivity in the brain in various ways. Anticonvulsant Side Effects Your doctor may want to take occasional blood tests to monitor your health while taking an anticonvulsant. Common side effects generally include: Anticonvulsants used to treat bipolar disorder include: Common side effects generally include: Several anticonvulsant medications are recognized as mood stabilizers to treat or prevent mood episodes in bipolar disorder. It is an anti-convulsive drug that stands apart from all other drugs used to treat convulsions or mood disorders because it does not share the same chemical composition. Medical researchers For rapid cycling or mixed bipolar states, there are some cases where Topiramate is effective when these other two drugs are not. Oct 11, - Even a ketogenic diet long used as an anti-seizure strategy, particularly in children, for whom parents can control carbohydrate intake has been shown Both treatment groups had a decrease in mania scores from baseline to endpoint, but the decrease was significantly greater in the placebo group Not taking topiramate on a daily basis may increase your risk for a relapse in your mood symptoms, and it may also increase the possibilities of troublesome side effects such as seizures. Unlike other drugs used to treat bipolar disorder (e.g., lithium, valproic acid), topiramate does not have blood levels that we try to achieve. Aug 10, - Default TOPAMAX FOR BIPOLAR DISORDER So I'm still an insomniac, only now I'm still stuck taking the topamax since it's an anti-seizure. I know I can't just quit. ... In my understanding, topomax is used for the mood stabilizing properties only and an anti-depressant is required to treat the depression. Review of the use of Topiramate for treatment of psychiatric disorders. Danilo Arnone Email author. Annals of General Psychiatry unahistoriafantastica.com Arnone; licensee BioMed Central Ltd. Received: 12 October Accepted: 16 February Published: 16 February Html url? Q wecache. Is topiramate a mood stabilizer? Faq (topamax) for treating disorders and ptsd. Topiramate (Topamax and generic forms) belongs to a group of medications called anticonvulsants and is used to treat seizure disorders (epilepsy). In adults, topiramate is used for prevention of migraine headaches and as a mood stabilizer to treat bipolar disorder. In children and adolescents, this medication may be. Do Not Do Recommendation Details. Recommendation: Do not offer gabapentin or topiramate to treat bipolar disorder. Interventions: Gabapentin or topiramate. Source guidance details. Guidance: Bipolar disorder: assessment and management (CG); Published date: June ; Paragraph number: ; Page. Sep 16, - It cannot be used to treat a headache that has already begun, but it may help to reduce the number of painful migraine. Topamax and Weight Loss. Doctors occasionally prescribe Topamax off-label to control bingeing and purging and promote weight loss in people with eating disorders such as bulimia. Lamictal (Lamotrigine) is most useful for treating severe seizure disorders, and for bipolar disorder with more depression symptoms than manic symptoms. Just be careful to increase your dose slowly to avoid skin rash. Topamax (topiramate) is very effective at preventing many types of seizures and migraines, but it can.
