Lisinopril works by blocking a substance in the body that causes the blood vessels to tighten. This content does not have an English version. It reduces the amount of water in the body by increasing the flow of urine which helps lower the blood pressure. Because lisinopril lowers blood pressure, it can help reduce the risks that may occur with long-term high blood pressure see Effects of High Blood Pressure. By blocking this enzyme, lisinopril causes blood vessels to relax, which can lower blood pressure. This can damage the blood vessels of the brain, heart, and kidneys, resulting in a stroke, heart failure, or kidney failure. For those with congestive heart failure, relaxing the blood vessels can make it easier for the heart to pump. Lisinopril and Hair Loss. Any use of this site constitutes your agreement to the Terms and Conditions and Privacy Policy linked below. Mayo Clinic does not endorse companies or products. Lisinopril may be started within 24 hours after a heart attack to increase survival rate. Lowering blood pressure can reduce the risk of strokes and heart attacks. Click Here to sign up.
