Overdose Seek medical attention immediately. Not every known side effect, adverse effect, or drug interaction is in this database. Nefazodone Increased risk of cardiotoxicity Food Interactions: Claritin-D, a non-sedating H<sub>1</sub>-blocker similar in structure to cyproheptadine and azatadine, is used to treat seasonal allergic rhinitis. Contact Location map Moscow St. Medication Nerve blocks and trigger point injection Physiotherapy Reflexotherapy acupuncture Spinal traction Medical exercise therapy, occupational therapy Yoga Massage therapy Chiropractic, osteopathy Visceral manipulation. Loratadine 10 mg once daily has been coadministered with therapeutic doses of erythromycin, cimetidine, and ketoconazole in controlled clinical pharmacology studies in adult volunteers. Missed Dose If your doctor has instructed you to take this medicine regularly and you miss a dose, take your next dose, as soon as you remember. Unlike most classical antihistamines histamine H<sub>1</sub> antagonists it lacks central nervous system depressing effects such as drowsiness. See a doctor immediately if you experience: Your doctor may use antihistamines for other conditions as well. The clinical relevance of this difference is unknown. Also the effects of other medicines may be increased or decreased by this medicine. While taking this medicine, if you experience, chest tightness, difficulty in breathing or swallowing, swelling in the face or lips, go to the doctor immediately and stop taking the medication until you have talked to your doctor. Your doctor may use antihistamines for other conditions as well. Loratadine, a non-sedating H<sub>1</sub>-blocker similar in structure to cyproheptadine and azatadine, is used to treat seasonal allergic rhinitis. Safety/Pharmacology. Metabolism: combination; see individual drugs. Excretion: combination; see individual drugs. Subclass: Antihistamine/Decongestant Combos. Mechanism of Action: combination; see individual drugs. Help. FDA Reporting Form. Learn about Claritin D (Loratadine and Pseudoephedrine) may treat, uses, dosage, side effects, drug interactions, warnings, patient labeling, reviews, and related when both the antihistaminic properties of loratadine and the nasal decongestant activity of pseudoephedrine are desired (see CLINICAL PHARMACOLOGY). Loratadine, sold under the brand name Claritin among others, is a medication used to treat allergies. This includes allergic rhinitis (hay fever) and hives. It is also available in combination with pseudoephedrine, a decongestant, known as loratadine/pseudoephedrine. It is taken by mouth. Common side effects include ?Medical uses ?Pharmacology ?History ?Society and culture. CLARITIN REDITABS (loratadine rapidly-disintegrating tablets) also contain the following inactive ingredients: citric acid, gelatin, mannitol, and mint flavor. CLINICAL PHARMACOLOGY Loratadine is a long-acting tricyclic antihistamine with selective peripheral histamine. H<sub>1</sub>-receptor antagonistic activity. Human histamine. Loratadine is a derivative of azatadine and a second-generation histamine H<sub>1</sub> receptor antagonist used in the treatment of allergic rhinitis and urticaria. Unlike most classical antihistamines (histamine H<sub>1</sub> antagonists) it lacks central nervous system depressing effects such as drowsiness. [PubChem]. CLARITIN () or unahistoriafantastica.com CLARITIN () or unahistoriafantastica.com Close. PRINCIPAL DISPLAY PANEL - Carton. NDC - Non-Drowsy\* Claritin-D pseudoephedrine sulfate mg/nasal decongestant - loratadine 5 mg/antihistamine Indoor & Outdoor Allergies. (1)Clinical Pharmacology Department, Schering-Plough Research Institute, Kenilworth, New Jersey, USA. pseudoephedrine sulfate mg, with 60 mg in an immediate-release coating and 60 mg in the barrier-protected core (CLARITIN-D 12 HOUR tablets) in study sessions, each separated by a day washout period. Claritin-D - General Information. A second-generation histamine H<sub>1</sub> receptor antagonist used in the treatment of allergic rhinitis and urticaria. Unlike most classical antihistamines (histamine H<sub>1</sub> antagonists) it lacks central nervous system depressing effects such as drowsiness. Claritin-D Pharmacology. Loratadine, a non-sedating H<sub>1</sub>-blocker similar in structure to cyproheptadine and azatadine, is used to treat seasonal allergic rhinitis. Unlike other H<sub>1</sub>-blockers, loratadine does not penetrate the CNS effectively and has a low affinity for CNS H<sub>1</sub>-receptors. CLARITIN-D 12 HOUR (Loratadine, Pseudoephedrine) drug information & product resources from MPR including dosage information, educational materials, & patient assistance.
