There are certain hormones in your body which cause an increase in your blood pressure levels by increasing your heart rate and making your heart beat harder. One of our doctors will review your order and approve appropriate treatment. This medicine may make you dizzy. Atenolol Interactions Make sure your doctor knows if you are pregnant or breastfeeding, or if you have asthma, emphysema, bronchitis, kidney disease, overactive thyroid, or diabetes. You may need to slowly decrease your dose before stopping it completely. If you forget a dose, take it as soon as you remember, and then go back to taking your tablets at the same time you would normally. You will choose your delivery option at the checkout. Speak to your doctor if there are any side effects which are bothering you or if you feel that the effect of Atenolol is too weak or too strong. Seek medical help immediately if you experience: Atenolol is a blood pressure medication.
