Start taking the pain reliever at the beginning of your period, or as soon as you feel symptoms, and continue taking the medicine as directed for two to three days, or until your symptoms have gone away. Your doctor will review your medical history and perform a physical exam, including a pelvic exam. A TENS device connects to the skin using adhesive patches with electrodes in them. All meds work best if you take them at the first sign of symptoms and for the first day or two of your period. Even with pain relievers, I get bad cramps with my period. These could be signs of endometriosis, fibroids, a sexually transmitted disease, or pelvic inflammatory disease. An Error Has Occured Whoops! Related Integrative approaches to treating pain Chronic pain: South-Paul JE, et al. Some types and pack sizes are only available from pharmacy counters, and some only on prescription. Don't skip exercise; this increases blood flow and can relieve muscle tension that contributes to cramps. International Journal of Gynaecology and Obstetrics. Nov 3, - Using ibuprofen for menstrual cramps I often joke with parents that my gynecologic knowledge is limited because most female adolescent patients prefer seeing a woman doctor. However, my daughter suffered with severe cramps, and I learned the following tip from my partner, Promise Ahlstrom, MD. "I've had bad period cramps since I started menstruating. I used ibuprofen but mg every four to six hours was not enough; I was afraid to take more until I read the prescription dosage for arthritis was as high as mg per day. I bumped my dosage up to mg per dose and that made a huge difference. I recommend. In fact, depending on how severe your cramps are, taking ibuprofen for a day or two before your period starts can prevent most of the cramping pain. Most women can take up to four of the mg over the counter ibuprofen tablets (mg per dose) up to every six to eight hours safely. No risk of addiction or of the medication. Mar 26, - But doctors routinely use big doses of ibuprofen. It comes as a prescription-strength mg tablet, which would be the same as FOUR of the tablets you get OTC. My obgyn actually has me taking huge doses of ibuprofen for cramps -- and she said the same thing as Ruki, to start before the pain. This makes Self care, without ibuprofen, for menstrual cramps. Nov 2, - Treatment of primary dysmenorrhea is directed at providing relief from the cramping pelvic pain and associated symptoms that typically accompany or immediately precede the onset of menstrual flow. To date, pharmacotherapy has been the most reliable and effective treatment for relieving dysmenorrhea. I used to take fistfuls of ibuprofen for period cramps but I became really concerned about side effects, especially because I was also using "Vitamin I" (as we called it) for post-triathlon training soreness. My doc at the time switched me to prescription strength naproxen (before Aleve was available OTC in Ibuprofen not working for cramps? Try naproxen. Dec 15, - Period pains can be treated with medication Credit: Alamy. The one you want is mefenamic acid, which most women know as Ponstan, says Dr Justine Setchell of King Edwards VII. That works particularly on muscles in the uterus to loosen them and relieve pain. Unlike ibuprofen or paracetamol which. These two factors can make taking ibuprofen in small doses very helpful because you will bloat less and it will help you relieve the pain of your cramps thanks to Ibuprofen is not a prescription for stopping women's periods depending on the woman and the period, it may not have any effect on the shedding of the uterus. I have terrible cramps from endo. I used to take off work for them because like you said, they are incredibly debilitating. I take a prescription form of ibuprofen and take Seasonique. Seasonique makes my periods a little better, but more importantly, I have fewer. The key to taking a pain killer for me is starting it a few days. The severity of cramps varies widely from woman to woman and even between the same woman's periods. Generic ibuprofen is a good place to start, as it is the cheapest. Enteric If prescription NSAIDs don't work, birth control pills can lessen the menstrual flow and solve the problems of dysmenorrhea for many women.
