The officers recorded and likely misspelled these as "solorex," "torix," "viox," and Vicodin, according to The Palm Beach Post. Its side effects can include confusion, depressed breathing, and drowsiness. According to the Centers for Disease Control and Prevention, more than a third of people who undergo surgery get an opioid prescription. He not only injured his knees, legs, and back playing golf, but also underwent multiple surgeries for those injuries and crashed a car. Over the course of his career, Woods likely struggled with pain. While we don't know how he or his physicians chose to manage his pain, we do know that prescriptions for pain medications, including opioid painkillers, are common in such situations. Woods' non-opioid prescriptions also come with side effects while less severe than those that accompany Vicodin, the effects can include fatigue and confusion. Vioxx, a brand name drug that Woods indicated he had not taken within the past year, was discontinued in after being linked to heart issues. Vicodin, the brand name for a painkiller that combines the opiate hydrocodone with the over-the-counter pain reliever acetaminophen or Tylenol, is a Schedule II substance due to its high potential for addiction. It was used to reduce swelling. An alcohol breathalyzer test showed Woods had a blood alcohol level of 0. The drug is illegal in the US; its side effects can include fatigue and chest pain. Torix, which is most likely a misspelling of Turox, is a brand name for another pain- and swelling-relief drug called etoricoxib.
